

CASE STUDY PAPER MILLS

Pulp & Paper Industry USA.

The paper and pulp industry is one of the largest industries in the world, and the United States plays a major role in it. The U.S. is the world's largest producer of pulp for paper, and was the second largest consumer of paper and paperboard worldwide as of 2020, having used some 64 million metric tons worth.

Paper Mill Safety.

Pulp and paper manufacturing can also be very hazardous due to massive weights and falling, rolling, and/or sliding pulpwood loads. Workers may be exposed to hazardous chemicals and hot, humid working conditions. In addition slip and falls and noise hazards are common.

Using EcoChemPro to Clean & Degrease.

EcoChemPro began working with Paper Mills in 2016. One Mill, in Louisiana started using EcoChemPro with impressive results. The team remarked on how safe they felt when using the product. They were able to clean extensively throughout the mill without the need for hot, heavy hazmat suits.

The Mill Manager commented ***"I was a little sceptical when I first heard about EcoChemPro. I knew caustic cleaned effectively but I also knew it was hazardous and the teams doing the cleaning needed to wear uncomfortable PPE. EcoChemPro gives us a safe to use solution for cleaning the Paper Machines, the Mill Basement, Motors, Pumps. Pipework & Floors. During machine outages we have a lot of subcontractors on site and it's good to know they can work whilst cleaning takes place. As a leader it's great to know my teams can clean safely"***

News Travels when Safety is improved!

As news began to spread throughout the Paper & Pulp industry, other mills wanted to see for themselves how they could improve safety when cleaning. Today paper mills across the USA use EcoChemPro to clean and degrease.

For more information on how EcoChemPro can support your business get in touch with our team today by calling 833-427-7947 or email info@ecochempro.com
